Data engineering and AI/ML enthusiast with hands-on experience in Data Analytics, Full Stack Python Development, and Machine Learning. Competent in creating SQL-based analytics solutions, and machine learning models. Looking for work in software development, data science, data engineering, and analytics machine learning.

Experience:

Rooman Technologies. KA, India (AI/ML Engineering Intern) **Sept 2024 – Apr 2025**

- Developed and optimized an **end-to-end fraud detection and risk scoring system** using **Python, Scikit-learn, and TensorFlow**, analyzing **280K+ real-world transactions** with highly imbalanced data (<0.2% fraud).
- Trained and evaluated multiple **machine learning and deep learning models** (Logistic Regression, Random Forest, Neural Networks), improving **ROC-AUC from 0.92 to 0.98** through **feature scaling, class weighting, and hyperparameter tuning**.
- Implemented **risk-based probability scoring (0–100)** and conducted **precision-recall and ROC-AUC analysis** to reduce **false negatives by 30%**, aligning ML outcomes with real-world business constraints.

Future Technologies. KA, India (Python Full-Stack Intern)

Mar 2024 – Apr 2024

- Developed strong proficiency in **Python, OOP, and core libraries (NumPy, Pandas, Matplotlib, Flask, Scikit-learn)**, leveraging **Django** to solve complex problems, manage data (**JSON, XML, SQLite**), and optimize tasks using **multithreading, multiprocessing, and unit testing** for efficient, reliable code.
- Developed a **weather forecast app with Django**, featuring live **API integration**, dynamic updates, responsive design, interactive displays, and location-based weather predictions.

Nikhil Paint Manufacturer/Supplier LTD. Karnataka, India (Digital Product Data Analyst)

June 2025 – Nov 2025

- Engineered and implemented **ETL techniques**, enhancing data processing for paint mixing software.
- Conducted data analysis using **Tableau, Python, and SQL**, identifying patterns that improved software efficiency and speed.
- Managed product development process utilizing agile development methodologies such as **Microsoft Azure DevOps**, resulting in a streamlined development process and reduced software development time.

Technology Stack:

- Languages:** SQL, Python, Java, HTML, CSS, JavaScript, C/C++
- AI/ML algorithms:** Regression, K-means, Clustering, Random Forest, Predictive Analytics, Decision Tree, KNN
- Machine Learning Libraries:** NumPy, Pandas, Scikit-learn, SciPy, TensorFlow, Matplotlib
- Frameworks:** Django, Flask
- Databases:** MySQL, MongoDB, PostgreSQL
- Tools:** Power BI, Tableau, JIRA, MS Excel, Jupyter notebook, MySQL Workbench, Google analytics, GitHub, Microsoft Office

Education:

Bachelors in Computer Science (KLS Gogte Institute of Technology, Belagavi, India). **Dec 2021 – Present**

Courses: Data Structures & Algorithm, Web Dev, DBMS, Advance Java, Python Programming, Computer Networks, Artificial Intelligence and Machine Learning, Applied Statistics, Embedded Systems

Pre-University College (Govindram Sekseria Science College, Belagavi, India).

June 2019 – Jul 2021

Courses: Physics, Mathematics, Chemistry, Computer Science

Projects:

Food Inspection Data Analysis

- Inspected the New York, Chicago, and Dallas Food Inspection large datasets containing about 560K+ records
- Designed a Dimensional Model using **Navicat**, creating necessary **15+ dimensions** and **5+ facts** and implementing **slowly changing dimensions (SCDs)**
- Built **ETL pipelines** to load data in Staging & Integration schema using **Alteryx & Talend** in less than **25 mins**
- Generated **10+ dashboards & reports** to analyze Restaurant details, inspections, and violations using Tableau, and Power BI

Fraud Detection and Risk Scoring System | Machine Learning

Jan 2025

- Built a **production-style ML pipeline** covering **data preprocessing, feature engineering, model training, evaluation, and inference**, handling **280K+ records** of highly imbalanced financial transaction data.
- Compared classical ML and deep learning models, achieving a **best ROC-AUC of 0.97**, and applied **threshold tuning** to balance fraud detection accuracy with operational costs.
- Designed a **risk scoring mechanism** converting model probabilities into actionable insights, reducing **manual fraud review effort by 30% (simulated)** and supporting AI-driven decision-making.

Weather forecast application using Django

April 2024

- Engineered an **end-to-end data pipeline** using **Python and Django** to ingest, validate, and store **real-time weather data** from external REST APIs, processing **10K+ records/month** across global locations with structured transformation for analytical use.
- Performed **data preprocessing, feature extraction, and exploratory data analysis (EDA)** on weather parameters (temperature, humidity, pressure, wind speed), enabling trend analysis and city-level comparisons with **99% data accuracy** and consistent schema enforcement.
- Optimized backend data workflows using efficient API calls, modular services, and caching, reducing **data ingestion latency by 25%**, improving query performance, and laying the foundation for **ML-ready datasets** and future predictive modeling.

Certification and Leadership/Volunteer Experience:

- **Google Data Analytics Professional Certificate – Coursera | Google** **Nov 2025**
Completed 8-course, 180-hour program covering **data cleaning, Spreadsheets, SQL, R, and Data Visualization**. Built real analytics Projects including dashboards and insight reports using **Tableau** and **R**. Gained practical experience in **data wrangling, exploratory analysis, and business problem-solving**. Built real-world analytics case studies using **Tableau, R, and BigQuery**.
- **Shantai Vruddhashram (Old Age Home), Team Leader** **March 2023**
Developed a dynamic website for an old age home NGO, enhancing visibility and driving growth through increased community engagement.
